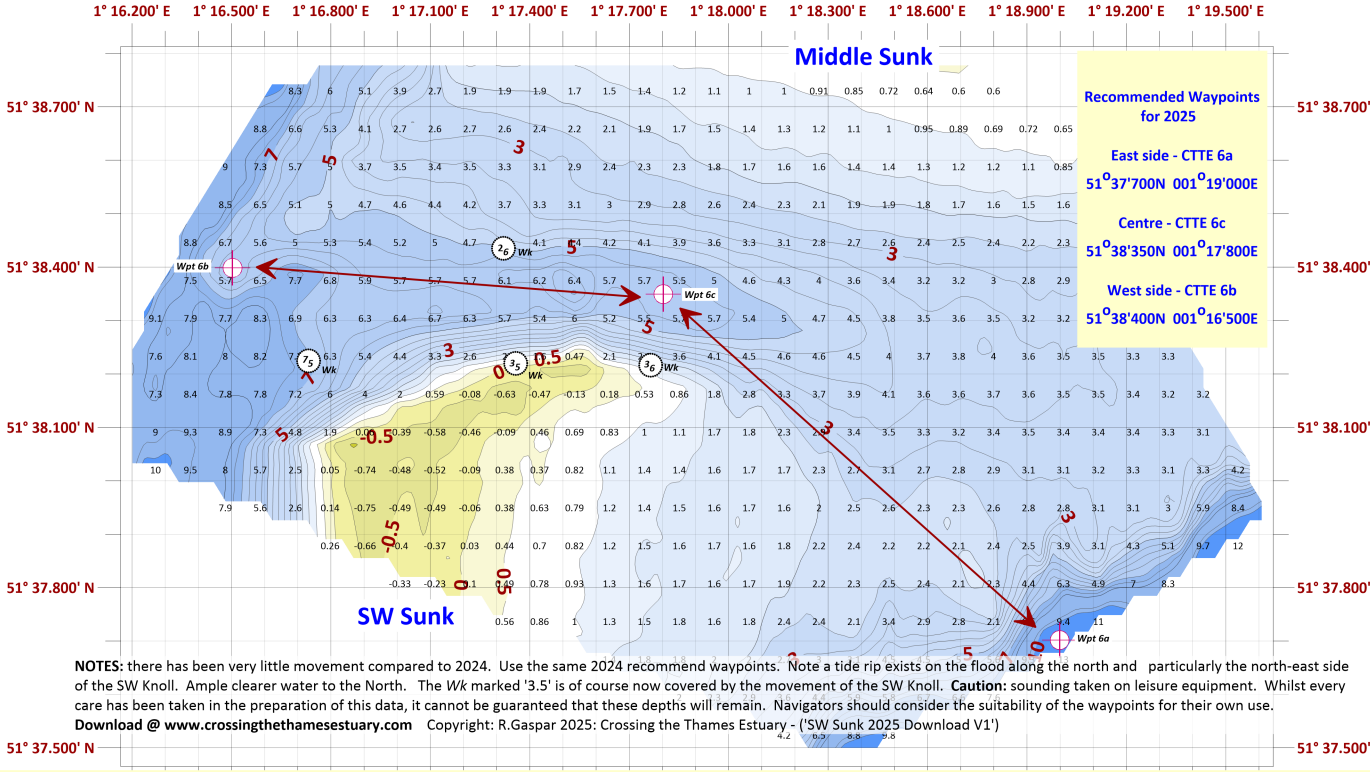
SW Sunk Swatchway 2025



NOTES: there has been very little movement compared to 2024. Use the same 2024 recommend waypoints. Note a tide rip exists on the flood along the north and particularly the north-east side of the SW Knoll. Ample clearer water to the North. The *Wk* marked '3.5' is of course now covered by the movement of the SW Knoll. **Caution:** sounding taken on leisure equipment. Whilst every care has been taken in the preparation of this data, it cannot be guaranteed that these depths will remain. Navigators should consider the suitability of the waypoints for their own use.
